## DETAILED ACTION

### *Claim Objections*

1. Claim 2 is objected to because of the following informalities: the phrase "...a *one*-quarter-wave retardation plate..." (emphasis added) should be changed to read as follows: "...a quarter-wave retardation plate..." as the latter phrase is widely recognized within the art as unambiguously denoting a retardation plate that retards the phase of a particular polarization component of a beam incident thereon by *one-quarter* of the design wavelength. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Riza (5,694,216).

Riza discloses the invention as claimed: a variable optical attenuator (intended use) comprising an electrically switchable Bragg grating device (See 24 or 25 in Fig. 2A; also see col. 9, ll. 38-40, 64-67--col 10, ll. 1-67) positioned to accept an incident optical beam and divide said incident optical beam into a transmitted undiffracted component and a diffracted component (col. 9, ll. 47-63), and a polarization-

converting reflector (27a & 27b) positioned to reflect said undiffracted component back through said electrically switchable Bragg grating device (col. 10, ll. 56-67).

Riza additionally discloses wherein said polarization reflector respectively comprises a one-quarter-wave retardation plate and a mirror (col. 10, ll. 20-26), and a 45-degree Faraday rotation plate and a mirror (Id.).
